

Water & Wastewater Laboratories, Inc.

Wastewater Analysis
Byproducts Analysis (Filtercake/ Sludge)
Wastewater Treatment Consulting, Audits and Troubleshooting
Data Interpretation
Process and Materials Analysis
Treatability Studies

We have been doing business since 1973

Our laboratory has been providing reliable analytical services for over thirty-five years. In 1992 we separately incorporated the laboratory, as Water & Wastewater Laboratories, Inc. Our parent company is Wastewater Management, Inc.

Diverse client base – Strong industrial background

Through the years we have provided analytical services for many clients including: metal finishing industries, engineering firms, municipal agencies, NPDES permit holders, chemical suppliers, and consulting firms. From working with our clients we have gained a strong background in various facets of the environmental industry. We are able to help our clients understand the analytical results and to decipher problem areas in their wastewater treatment systems. For certain clients needs we have developed specialized test procedures and analytical modifications for their unique problems.

Complete laboratory capabilities

We operate a full service laboratory capable of analyzing a wide range of parameters. Our staff has full instrumentational capabilities to provide quality analytical data. We follow methods set forth in SW846, EPA Methods for Water & Wastewater, Standard Methods for the Examination of Water & Wastewater, and ASTM analytical methods. We also incorporate those methods provided by our clients, or designed for our clients specific in-process utilization and quality control.

Field services

Sampling services include automatic composite and automatic sequential sampling. We can provide a range of field services for our clients: Wastewater discharge in-process or at the manhole, investigative or for compliance monitoring, surface water analyzed for bacteria or a municipality needing sampling for a citywide survey.

Wastewater treatment system consulting and troubleshooting

Due to our years of experience, we have become experts in industrial wastewater treatment. We provide consulting and auditing services. We will work with you to provide the “best fit” system modifications and upgrades. We provide troubleshooting services to determine problem areas, and advise on repairs. We provide control equipment calibrations. We have complete support from our parent company Wastewater Management Inc. for all projects. They can handle all aspects of wastewater treatment.

We are a full service environmental company that works closely with our clients and their individual requirements.
